

MOST High Pressure Production Blow Out Preventer

The MOST High Pressure Production Blow Out Preventer (BOP), when in the closed position the rams seal and clamp around the polished rod to seal off the well bore and hold the weight of the rod string.

- Rams are balanced and can be opened and closed under pressure.
- Ram rubbers developed to produce optimum sealing.
- Designed to keep well height optimally short.
- Nitride parts to prevent galling.
- Function tested and hydrostatic tested following API 6A requirements.
- Ram seal tested at 10,000PSI, full body shell tested at 15,000PSI.
- Rated for sour service.
- MOST High pressure BOPs can be customized to suit your specific well requirements and conditions.
