

Production Blow Out Preventer

The **MOST** Sealing Production Blow Out Preventer (BOP), when in the closed position the rams seal around the polished rod to seal off the well bore.

- Universal top connection can be used with any drive head (studded or flanged connection).
- Suitable for sour service applications.
- Polished rod rams are available from 7/8" to 2".
- Offset rams provide positive alignment.
- Ram and ram stems are nitride to prevent galling.
- Ram seals and rubbers are designed for easy replacement in the field.
- Positive ram stop is incorporated so rams close in center equally.
- Manufactured from NACE materials for sour service (DD) to meet API 6A requirements.
- A large combination of side outlets available.
- Temperature Class L: -46°C (-50°F) to +80°C (+180°F).
- Product specification level (PSL) 1 standard. Level 2 and 3 also available.
- Working pressure 2,000PSI, 3,000PSI and 5,000PSI.
